

1. Synthesizing available knowledge

EKLIPSE facilitates answer to questions from decision makers on biodiversity and ecosystem services that require in-depth collection, analysis and synthesis of existing knowledge from science and other sources of knowledge.

2. Jointly identifying research needs

EKLIPSE will improve the integration of emerging issues into policy development and research funding related to or impacting on biodiversity and ecosystem services.

EKLIPSE

Knowledge & Learning Mechanism
on Biodiversity & Ecosystem Services

3. Building the network of networks

EKLIPSE is building a virtual community of people and institutions that are willing and committed to work with colleagues to make sure their collective knowledge and values on biodiversity and ecosystem services are used to support decisions that impact our environment and our well-being.

4. Science for everyone

EKLIPSE encourages citizen engagement and societal debate with policy and research on biodiversity and ecosystem services.

EKLIPSE

Knowledge & Learning Mechanism
on Biodiversity & Ecosystem Services

Developing a mechanism
for supporting better
decisions on our
environment
based on the best
available knowledge.

As a scientist, interact, share your knowledge, and discuss emerging issues with policymakers and other stakeholders.

As a policymaker, make better informed decisions through alliances with scientists and other stakeholders.

As a citizen, discuss key environmental issues that matter to you and create links with scientists and policymakers through an online science-society forum and interactive events such as science cafes.

How to get involved in supporting better decisions on our environment

- Are you an expert in one or more thematic areas of the calls and want to make your knowledge and expertise visible?
- Are you interested in collaborating in a transdisciplinary setting and in learning about other approaches?
- Do you want to contribute to an assessment that is policy relevant?
- Do you want to expand your network for future collaborations?

There are numerous ways for individuals and institutions to get involved in EKLIPSE and numerous ways you can benefit from this involvement.

Participate in the open calls (for experts, methodological support, evidence), join the expert networks, review the expert work before it reaches the decision makers, or send us directly feedback on how you envisage the mechanism to work. Young scientists have specific opportunities. Interested citizens are invited to participate in 'Science for everyone'.

And there are different ways to get an answer to your biodiversity-related questions.

Get engaged and make a difference for biodiversity...

OPEN CALL (Deadline to apply: June 17th 2016)

EKLIPSE is inviting experts to form an expert working group to develop an impact evaluation framework for nature-based solutions to promote climate resilience in urban areas. If you are interested in participating in this policy-relevant process, please propose your candidacy before June 17th. Detailed call and further information on <http://www.eclipse-mechanism.eu>
